Summary

Frontend Engineer with 4+ years of experience designing and scaling complex, data-intensive web applications using React, TypeScript, and modern web technologies. Proven track record of leading frontend architecture, building extensible systems, and optimizing performance in enterprise and regulated environments.

Strong in building maintainable design systems, improving frontend performance, and collaborating across backend and product teams. Expanding into fullstack development with hands-on experience in API design, system architecture, and scalable application development.

Work Experience

Front-End Engineer | *July 2024 – Present*

PAPERMAP.AI, Remote (New York, USA)

- Led frontend architecture for an enterprise inventory and risk management platform, building scalable, modular systems to support complex governance and audit workflows
- Redesigned data-intensive interfaces, reducing user navigation time by ~25% and improving audit traceability across compliance workflows
- Translated complex risk and compliance metrics into intuitive, data-driven UI components and optimized form flows, significantly improving usability and reducing user friction
- Designed and implemented a scalable plugin-based architecture enabling extensibility across multiple client applications, reducing feature duplication and improving feature delivery speed by ~40%
- Established frontend standards through code reviews, documentation, and mentorship, improving code quality and team consistency
- Accelerated development cycles by ~30% by integrating AI-assisted tooling to automate repetitive implementation tasks

Front-End Engineer | *August 2023 – Present*

JACKSON EDUCATIONAL COMPLEX, CONTRACT - Remote (Ghana)

- Led a team of 3 engineers to design and deliver a scalable student portal, improving access to academic and administrative data
- Designed and maintained a reusable design system using React and Chakra UI, ensuring consistency and accessibility across the platform
- Implemented CI/CD pipelines using GitHub Actions and Docker, reducing deployment friction and improving release reliability
- Collaborated on backend data structures and performance optimizations to support scalable data retrieval
- Improved development efficiency by ~20% through structured code reviews and cross-functional collaboration.

Front-End Engineer | *April 2023 – Present*

SYMLIQ DEVELOPERS, PART-TIME - Remote (Accra, Ghana)

- Built and optimized a secure, data-driven insurance platform using React and TypeScript, handling sensitive risk and audit data

- Partnered with cross-functional teams to deliver a financial application with complex auditing and reporting features
- Developed modular component libraries using Storybook, improving UI consistency and development speed
- Improved Shopify storefront performance, reducing load times by 20% through frontend optimizations
- Integrated third-party services and plugins while maintaining performance and maintainability

Front-End Engineer Intern | *July 2024 – January 2025*

CAREFUSION LTD, Remote (Accra, Ghana)

- Developed internal dashboards for visualizing audit logs and governance metrics, improving operational visibility
- Built reusable UI components aligned with accessibility and design standards
- Contributed to agile delivery cycles, shipping production-ready features in a collaborative engineering environment

Software Developer | *March 2020 – January 2022*

FREELANCE / CONTRACT, Remote (Accra, Ghana)

- Designed and built vendor and healthcare platforms, translating complex workflows into intuitive user experiences
- Delivered a cross-platform mobile application using React Native and Django, supporting secure transaction flows
- Improved client conversion rates by optimizing user flows and application performance

Education

Bachelor of Science in Computer Science

Kwame Nkrumah University of Science and Technology (KNUST), Kumasi, Ghana

Additional Skills

Frontend Core: React, Next.js, TypeScript, JavaScript, HTML5, CSS3, API Integration, Agile, Component-driven architecture, State management (Context API, Redux Toolkit, Zustand), Performance optimization, React Testing Library

Architecture & Advanced UI: Design Systems, Storybook, Accessibility, Tailwind CSS, Chakra UI, SASS/SCSS, Shaden

DevOps & Tooling: Docker, CI/CD, GitHub Actions, Git, Webpack, Bash

Backend & Mobile: Node.js, React Native, Flutter, MySQL, PHP, Laravel
